ESTD - 1928

Curriculum Structure and Evaluation Scheme for M. Tech. in Mechanical Engineering

To be implemented for 2025-27 Batch

(With Effect from Academic Year 2025-26)

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Vision of the Institute

Transform young aspirant learners towards creativity and professionalism for societal growth through quality technical education.

Mission of the Institute

1. To transfer the suitable technology, particularly for rural development.
2. To enhance diverse career opportunities among students for building a nation.
3. To acquire the environment of learning to bridge the gap between industry and academics.
4. To share values, ideas, beliefs by encouraging faculties and students for welfare of society.

The vision of the Mechanical Engineering Department

To impart quality technical education in the field of Mechanical Engineering for the benefits of society

Mission of the Mechanical Engineering Department

1. To provide quality education among the students through the curriculum and industrial exposure.
2. To develop a learning environment leading to innovations, skill development and professional ethics through curricular and extracurricular activities for societal growth.

Program Outcomes (POs) for an engineering graduate:

1. An ability to independently carry out research /investigation and development work to solve practical problems.
2. An ability to write and present a substantial technical report/document.
3. Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Table No.1: Abbreviations

| Abbreviation	Meaning
ISE	Internal Semester Evaluation
SEE	Semester End Examination
VSEC	Vocational and Skill Enhancement Courses
VEC	Value Education Course
PCC	Program Core Courses
PEC	Program Elective Courses
ELC	Research Methodology
	Technical Communication
	Dissertation I
	Dissertation II
	Internship
CCC	Co-Curricular Courses
L	Lecture
PR	Practical
TH	Theory
TW	Term Work
OR	Oral
ME	Mechanical Engineering

GENERAL COURSE STRUCTURE

A. Definition of Credit

Table No.2: Definition of Credit

1 Hour Lecture (L) per week	1 Credit
1 Hour Tutorial (T) per week	1 Credit
2 Hours Practical (P) per week	1 Credit

B. Range of Credits: (M.Tech. or Equivalent) in Tech. :
Two-year Post Graduate program in Technology has about 80 credits, the total number of credits proposed for the two-year M.Tech. in **Mechanical Engineering** is kept as **80.**

Table No.3: Range of Credits

Course Category		Proposed Credits
Programme Core Course (PCC)	Program Courses	19
Programme Elective Course (PEC)		11
Vocational and Skill Enhancement Course (VSEC)	Skill Courses	4+4*
Value Education Course (VEC)	Humanities Social Science and Management (HSSM)	4+2*
Research Methodology(RM)		2
Technical Communication		2
Dissertation I	Experiential Learning Courses	16
Dissertation II		16
Internship		4
Co-curricularCourses(CCC)	Liberal Learning Courses	2
Total Credits		**80**

Note:* –Credits are not to be considered while calculating marks for the declaration of the final result (Pass/Fail)."

.   **Semester wise Credit Distribution Structure for Two Year M.Tech in Mechanical Engineering**

Table No.4: Semester wise Credit Distribution Structure

Semester		I	II	III	IV	Total Credits
Program Core Course (PCC)	Program Course	13	6	-	-	19
Program Elective Course (PEC)		3	8	-	-	11
Vocational and Skill Enhancement Course (VSEC)	Skill Courses	2	2	2*	2*	4
Value Education Course (VEC)	Humanities Social Science and Management (HSSM)	1*	1*	4	-	4
Research Methodology	Experiential Learning Courses	2	-	-	-	2
Technical Communication		-	2	-	-	2
Dissertation I		-	-	16	-	16
Dissertation II		-	-	-	16	16
Internship		-	-	-	4	4
Co-curricular Courses (CCC)	Liberal Learning Courses	-	2	-	-	2
Total		20	20	20	20	80

Note:* –Credits are not to be considered while calculating marks for the declaration of the final result (Pass/Fail)."
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

In accordance with the NHEQF, the levels for the PG program are given in the given Table

Table No.5: Level for the PG Program

Level	Qualification Title	Credit Requirements	Semester	Year
6.5	1-Year PG after a 4-year UG	20	I	1
		20	II	1
7	2-Year PG after a 4-year UG such as B.E., B. Tech. etc.	20	III	2
		20	IV	2

TEACHING AND EVALUATION SCHEME FOR FIRST YEAR M-TECH

Level 6.5 Exit Criteria:

Students who exit at the end of 1ˢᵗ year with the completion of 40 credits shall be awarded a Postgraduate Diploma.

Guidelines for Program Elective Course

Students may choose any course or NPTEL MOOCs course from the department's recommended list. The total credits earned through MOOCs must match the allocated credits for the respective elective. (One credit is awarded for each four-week MOOCs course).

* Online NPTEL MOOCs courses will be offered as per availability on the portal of NPTEL/SWAYAM

Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

SEMESTER I

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

25-PCC-ME-5-01 : Advanced Engineering Thermodynamics		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Thermodynamics ,Heat Transfer, Refrigeration & Air Conditioning, Energy Engineering

Course Objectives:
- To provide the sufficient knowledge of thermodynamics to apply in real engineering problems
- To familiarize the students about the thermodynamic relations and process and their use to analysis the given thermal application
- To understand the concept of application of thermodynamics such as refrigeration, Gas cycles etc.

Course Outcomes:
After completion of the course, learners should be able to
CO1: **Review** the laws of thermodynamics
CO2: **Explain** the use of Maxwell's relations, Clapeyron equation and apply equations of state for real gasses and compare.
CO3: **Analysis** of second law of thermodynamics for various processes.
CO4: **Analyze** gas turbine cycles.
CO5: **Illustrate** the ideal gas, real gas, its deviation with a compressibility chart.

Course Contents		
Unit I	**Review of laws of thermodynamics**	**8 Hours**

First law of thermodynamics for a closed system undergoing a cycle and change of state, Limitation of first law of thermodynamics, Second Law of Thermodynamics cycle heat engine, refrigerator and heat pump, Kelvin- Planck and Clausius statements and their equivalence, Reversibility and Irreversibility, Carnot cycle, Carnot theorem, Absolute thermodynamic temperature scale.

Unit II	**Entropy**	**8 Hours**

Entropy as a property of a system. entropy of pure substance., entropy change in a reversible and irreversible processes, increase of entropy principle, Introduction to Available and
Unavailable energy: The Entropy Change of Ideal Gases, Reversible Steady-Flow Work, Entropy Change of a System, ΔS system, Mechanisms of Entropy Transfer during Heat and mass transfer, Entropy Generation for closed Systems and Control Volumes

Unit III	**Thermodynamic relations**	**8 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

The Ideal-Gas Equation of State ,Other Equations of State:Van der Waals Equation of State Beattie-Bridgeman Equation of State,Benedict-Webb-Rubin Equation of State, Virial Equation of State,Maxwell's equation, joule- kelvin effect,clausius-clapeyron equation.

Unit IV	Properties of Steam	8 Hours

Properties of Steam:
Dryness fraction, enthalpy, internal energy and entropy, steam table and Mollier chart, first law applied to steam processes.

Vapour Power Cycles and Gas Power Cycles:
Carnot vapour cycle, Rankine cycle, Ideal reheat, Rankine cycle, Introduction to cogeneration.Air standard assumptions, Otto cycle, Diesel cycle, dual cycle, Stirling cycle, Ericsson cycle, Atkinson cycle, Brayton cycle.

Unit V	Refrigeration Cycle	8 Hours

The Reversed Carnot Cycle, The Ideal Vapor-Compression Refrigeration Cycle,Actual Vapor-Compression Refrigeration Cycle, Selecting the Right Refrigerant, Innovative Vapor- Compression Refrigeration Systems, Multistage Compression Refrigeration Systems, Multipurpose Refrigeration Systems with a Single Compressor Liquefaction of Gases,Gas Refrigeration Cycles, Absorption Refrigeration Systems

Unit VI	Fuels and Combustion	8 Hours

Types of fuels, calorific values of fuel and its determination, combustion equation for hydrocarbon fuel, determination of minimum air required for combustion and excess air supplied conversion of volumetric analysis to mass analysis, fuel gas analysis. Stoichiometric A/F ratio, lean and rich mixture, products of combustion, properties of engine fuels

25-PCC-ME-5-02: Machining and Forming Processes

Teaching Scheme: Theory: 3Hours/Week	Credit: 03	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Manufacturing Processes,workshop Technology I,Machining Science and Technology,Engineering Materials

Course Objectives:
- To provide the sufficient knowledge of machining and forming processes to apply in real engineering problems
- To familiarize the students about the fundamental principles of machining and forming
- Understand the importance of machining and forming process applied to industrial applications

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Classify** conventional and non-conventional machining processes.

CO2 **Understanding** mechanism of metal cutting, introduction to tool life,cutting fluids..

CO3: **Describe** the mechanism and mechanics of grinding processes,various non-conventional machining processes.

CO4: **Understanding** Rolling, extrusion and wire drawing processes.

CO5: **Understanding** Forging processes.

CO6: **Understanding** Sheet metal working processes.

Course Contents		
Unit I	**Conventional Machining**	**6 Hours**

Machine Tools and machining operation: Introduction, generating motions of machine tools, machines using single point tools, machines using multipoint tools, machines using abrasive wheels, summary of machine tool characteristics and machining equations

Unit II	**Metal Cutting**	**6 Hours**

Mechanics of Metal Cutting: Introduction, terms and definitions, chip formation, forces acting on the cutting tool chip thickness, friction in metal cutting.

Tool life and tool Wear: Introduction, Cutting Fluid and Surface roughness: application of cutting fluids

Unit III	**Grinding & Non-conventional Machining Processes**	**6 Hours**

Grinding: Introduction, grinding wheel, effect of grinding conditions on wheel behavior, determination of the density of active grains.

Non-conventional Machining Processes: Introduction, range of nonconventional machining processes, ultrasonic machining, water-jet machining, abrasive-jet machining, chemical machining, electrochemical machining

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Unit IV	Rolling & Extrusion	8 Hours

Rolling: Forces and Geometrical Relationships in rolling, Analysis of Rolling load and variables, Problems and Defects in rolled products, Theories of cold and hot rolling, Rolling mill control. **Extrusion:** Analysis of extrusion, Deformation, Lubrication and defects in extrusion, production of seamless pipe and tubing, drawing of rods, wires and tubes: Analysis of wire and tube drawing, residual stresses in rod, wire and tubes. Sheet metal forming: Forming limit criteria and Defects in formed components.

Unit V	Forging	6 Hours

Forging in plain stain, calculations of forging loads in Closed die forging, residual stresses in forgings, Forging defects

Unit VI	Sheet Metal Processes	6 Hours

Basic applications: shearing processes like blanking, piercing, and punching. Drawing processes like shallow and deep drawing of cylindrical and rectangular bodies forming and bending including estimation and control of spring back.

25-PCC-ME-5-03 : Advanced Vibrations and Acoustics

Teaching Scheme: Theory: 4 Hours/Week	Credit: 04	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: ,Theory of Machines,Dynamics of Machinery,Solid Mechanics,Design of Machine Elements

Course Objectives:
- To provide the sufficient knowledge of mechanical vibrations to apply in real engineering problems
- To familiarize the students about the fundamental principles of mechanical vibrations
- To understand the importance of vibrations in the background of wear and tear of the machine components, noise reductions and conditioning monitoring

Course Outcomes:

After completion of the course, learners should be able to

CO1: To develop in our students the ability to engage themselves to solve vibration problems.

CO2: To be creative problem solvers whilst dealing with machinery involving periodic phenomena

CO3: To integrate empirical analysis and add to the world of field expertise where possible

CO4: To adapt to recent advances in knowledge

Course Contents		
Unit I	**Multi Degree Freedom System**	**8 Hours**

Multi Degree Freedom System:

Free Vibration equation of motion. Influence Coefficient i) Stiffness Coeff. (ii) Flexibility Coefficient. Generalized coordinates, and Coordinate couplings. Lagrange's Equations Matrix Method Eigen Values Eigen Vector problems. Model Analysis.Forced Vibrations of undamped system and modal analysis.

Multi Degree System Numerical Methods:

(i)Rayleigh's Method, (ii)Rayleigh-Ritz Method (iii) Holzer's Method (iv)Methods of Matrix iterations (v) Transfer Matrix Method, Impulse response and frequency response functions.

Unit II	**Continuous System:**	**8 Hours**

Vibrations of String, Bars, Shaftsand beams, free and forced vibration of continuous systems.Transient vibrations: Response of a single degree of freedom system to step and any arbitrary excitation, convolution(Duhamel's) integral impulse response functions.

Vibration Measurement: FFT analyzer, vibration exciters, Signals analysis. Time domain & Frequency domain analysis of signals. Experimental modal analysis, Machine Conditioning and Monitoring, Fault diagnosis. Example of Vibration tests- Industrial case studies

Unit III	**Vibration Control**	**6 Hours**

Balancing of rotating machine, In-situ balancing of rotors, control of natural frequency   introduction of damping, vibration isolation & vibration absorbers.

Unit IV	Random Vibration	6 Hours

Expected values auto and cross correlation function, Spectral density, response of linear systems, analysis of narrow band systems.

Unit V	Non-Linear Vibrations	8 Hours

Systems with non-linear elastic properties, free vibrations of systems with non-linear elasticity and damping, phase-plane technique, Duffing's equation ,Jump phenomenon ,Limit cycle, Perturbation method.

Unit VI	Noise and Its Measurement	8 Hours

Sound waves,governing equations, its propagation**,** Fundamentals of Noise, Decibel, Sound Intensity, Sound fields, reflection absorption and transmission.

Noise measurement,Soundmeter,allowed exposure levels and time limit by B.I.S.,Octave Band analysis of sound, Fundamentals of Noise control, source control, path control, enclosures, noise absorbers, noise control at receiver.

Learning Resources

R5. Mechanical Vibration Analysis:Srinivasan, McGraw Hill.

R6. Mechanical Vibrations: G K Groover.

R7. Vibration and Noise for Engineers: KewalPujara ,Dhanpat Rai & co.

25-PCC-ME-5-04 : Numerical Methods and Computational Techniques

Teaching Scheme: Practical: 4 Hours/Week	Credit: 02	Examination Scheme: TW : 50 Marks PR/OR :50 Marks

Prerequisites Courses: Numerical Methods and optimisation,Engineering Mathematics,C Language,Matlab

Course Objectives: : The course aims to provide the knowledge of computer programming to write the codes for the numerical methods learned in "Numerical Analysis" using PYTHON / C language / MATLAB.

Course Outcomes: Upon successful completion of the course, students will be able to:

CO1: **Write** computer programs to solve engineering problems with PYTHON / C language / MATLAB.

CO2: **Implement** numerical methods in PYTHON / C language / MATLAB.

CO3: **Analyze** the stability of the algorithm.

CO4: **Analyze and evaluate** the accuracy of common numerical methods.

CO5: **Ability** to use approximation algorithms in real world problems.

Course Contents		
1	Module 1	6 hours
Gaussian elimination, Jacobi, Gauss Seidel methods.		
2	Module 2	6 hours
Bisection method, fixed point iteration scheme, Newton-Raphson method, secant method.		
3	Module 3	6 hours
Lagrange's interpolation formula, Newton's divided difference formula.		
4	Module 4	6 hours
Trapezoidal rule, Simpson's 1/3,3/8-rules.		
5	Module 5	8 hours
Euler's method modified Euler's method, Runge-Kutta method, Milne's method, Adams-predictor-corrector method.		
Learning Resources

25-PEC-ME-5-01A: Advanced Refrigeration

Teaching Scheme: Theory: 3 Hours/Week	Credit: 03	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses:

Engineering Thermodynamics, Heat Transfer, Refrigeration and Air conditioning

Course Objectives:
- To vapor compression refrigeration and multi-stage vapor compression systems.
- To Study and identify various types of refrigerants and their properties
- To Illustrate Nomenclature, Refrigerants, alternative refrigerants
- Design and analyze vapor absorption system
- select refrigerant control techniques, and do piping designing for refrigeration plant

Course Outcomes:

After completion of the course, learners should be able to

CO1 : **Formulate and solve** vapor compression refrigeration and multi-stage vapor compression systems.

CO2: **Study and identify** various types of refrigerants and their properties., such as zeotropic, azeotropic etc.,

CO3: **Illustrate** Nomenclature, Refrigerants, alternative refrigerants, CFC/HCFC phase-out regulations, action with lubricating oil, retrofitting, refrigerant blends, and effects on refrigeration components.

CO4: **Design** and analyze vapor absorption system

CO5: **select** refrigerant control techniques, and do piping designing for refrigeration plant

Course Contents		
Unit I	**Vapour Compression refrigeration**	**6 Hours**
Vapour compression refrigeration, actual cycle, second law efficiency, multistage compression with intercooling, Multi-evaporator systems, Cascade systems.		
Unit II	**Compressor**	**6 Hours**
Performance characteristics and capacity control of reciprocating and centrifugal compressors, screw compressor and scroll compressor.		
Unit III	**Evaporator & Condensers**	**6 Hours**
Design, selection of evaporators, condensers, system balance, control systems, motor selection.		
Unit IV	**Refrigerants**	**6 Hours**

History, Nomenclature, Refrigerants, alternative refrigerants, CFC/HCFC phase-out regulations, action with lubricating oil, retrofitting, refrigerant blends, effects on refrigeration components. Thermoelectric and nonconventional refrigeration systems, adiabatic de- magnetization

Unit V	Vapor absorption refrigeration	8 Hours

Vapor absorption refrigeration, Li-Br and aqua ammonia system, calculation of mass flow rate and system performance, energy balance, controls, analysis of rectifier and analyzer, single effect and double effect systems,vapour transformer.

Unit VI	Controls and Piping in Refrigeration system	8 Hours

Refrigeration controls, Expansion devices: design and selection, refrigeration system piping design

Learning Resources

(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

25-PEC-ME-5-01B: CAD-CAE

Teaching Scheme: Theory: 3 Hours/Week	Credit: 03	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Solid Modeling and Drafting,Computer Aided Engineering,Heat Transfer,Fluid Mechanics,Dynamics of Machinery,Numerical Methods and Optimisation.

Course Objectives:

- To Demonstrate - Polynomial and spline interpolation, Bezier curves, B-splines to surfaces representation, patches and composite surfaces.
- To Design and create Solid model assembly of thermal and fluid engineering system in CAD software
- To Analyze simple Engineering problems by selecting appropriate Mesh generation.
- To Modeling and Meshing of Thermal and Fluid Flow equipment in CAD..
- To Simulate and demonstrate Thermal and Fluid systems by using ANSYS, EES, MATLAB etc.
- To Understand and simulate computer aided manufacturing

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Demonstrate** - Polynomial and spline interpolation, Bezier curves, B-splines to surfaces representation, patches and composite surfaces.

CO2: **Design and create** Solid model assembly of thermal and fluid engineering systems in CAD software.

CO3: **Analyze** simple Engineering problems by selecting appropriate Mesh generation.

CO4: **Modeling and Meshing** of Thermal and Fluid Flow equipment in CAD.

CO5: **Simulate and demonstrate** Thermal and Fluid systems by using ANSYS, EES, MATLAB etc.

CO6: **Understand and simulate** computer aided manufacturing

Course Contents		
Unit I	**Solid Modeling**	**6 Hours**

Overview of CAD Applications, Curves - Polynomial and spline interpolation, Bezier curves, B-splines, Introduction to surfaces representation, patches and composite surfaces.
Solid Modeling: Representation of Solids, Topology, Wireframe, Boundary representation (B-Rep), CSG, Solid modeling operations.

Unit II	**Computer Graphics**	**6 Hours**

Computer Graphics: Mathematical principles for 2D and 3D visualization, Matrix transformations,Modeling, viewing, projection and rendering, OpenGL graphics library, CAD data formats and exchange.
Meshing – Mesh topology, Data structures, Introduction to Mesh generation algorithms, Surface meshes, Element types and quality criteria.

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Unit III	Modeling and Meshing	6 Hours
Modeling and Meshing of Thermal and Fluid Flow equipment.		
Unit IV	Lab simulations for Thermal and Heat Transfer	6 Hours
Computer Aided Engineering: Lab simulations for Thermal and Heat Transfer, Computational Fluid Dynamics: Lab simulations for Fluid Flow.		
Unit V	lab simulation Thermal and Stress Analysis.	6 Hours
Computer Aided Engineering: Multi physics lab simulation for Thermal and Stress Analysis.		
Unit VI	lab simulation flow induced vibrations.	6 Hours
Computer Aided Engineering: Multiphysics lab simulation for flow induced vibrations.

25-PEC-ME-5-01C: Surface Engineering

Teaching Scheme: Theory: 3 Hours/Week	Credit: 03	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Material science and technology,composite materials,manufacturing technology

Course Objectives:
- To provide the sufficient knowledge of thermodynamics to apply in real engineering problems
- To familiarize the students about the thermodynamic relations and process and their use to analysis the given thermal application
- To understand the concept of application of thermodynamics such as refrigeration, Gas cycles etc.

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Learn** the importance and need of surface engineering.

CO2: **Describe** various surface cleaning and modification techniques.

CO3: **Understand** the concepts of surface integrity.

CO4: **Compare** various surface coating technologies

CO5: **Select** appropriate method of coating for a given application.

CO6: **Apply** measurement techniques and carry out characterization of coated surfaces.

Course Contents

Unit I	Introduction	6 Hours

Definition, Significance, Role of surface Engineering in creating high performance product, Functional characteristics of a surface, Nature of surfaces: Deformed layer, Beilby layer, chemically reacted layer, Physisorbed layer, Chemisorbed layer; Classification of Surface Engineering Techniques

Unit II	Surface Preparation Techniques	6 Hours

Factors affecting selection of cleaning process, Significance of surface preparation, Classification of cleaning processes, Chemical cleaning processes; Mechanical Processes; Substrate considerations, Surface contaminants or soils: Various types and their removal, Tests for cleanliness.

Unit III	Surface Integrity	6 Hours

Definition, Importance, Surface alterations, Factors in Surface Integrity: Visual, Dimensional Residual stress, Tribological, Metallurgical; Measuring Surface Integrity effects: Minimum and Standard data set, Macroscopic and microscopic examination.

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Unit IV	Surface Modification Techniques	6 Hours
	Classification, Thermal treatments: Laser and electron beam hardening, Mechanical treatments: Short peening: Peening action, surface coverage and peening intensity, Types and sizes of media, Control of process variables, equipment; Ion Implantation: Basic Principle, Advantages and disadvantages, equipment.	

Unit V	Surface Coating Techniques	6 Hours
	Thermal Spraying: Types and applications; Chemical Vapour Deposition: Principles, Reactions, Types and applications; Physical Vapour Deposition: Basic principle, Evaporation, Sputtering, Ion Plating, Applications; Electroplating: Principle of working and applications; Types of Coatings: Hard, Soft, Single layer, Multi-layer	

Unit VI	Characterization of Coatings	6 Hours
	Physical characteristics and their measurements: Coating thickness, Surface Morphology and Microstructure. Mechanical properties and their Measurements: Hardness, Adhesion, Friction and Wear.

25-PEC-ME-5-01D: Manufacturing Automation

Teaching Scheme: Theory: 3 Hours/Week	Credit: 03	Examination Scheme: **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Hydraulics and Pneumatic,Fluid Mechanics,Mechatronics,Electronics and electrical Engineering,Robotics and Automation,Production technology,Manufacturing Process

Course Objectives:
- To know about the Automation and types of Automations in the industries.
- To understand the different Automated flow lines in the Industries.
- To perform one or more processing and/or assembly operations on a starting raw material, part, or set of parts.
- To perform a sequence of automated or mechanized assembly operations Flexible manufacturing system (FMS)—a highly automated machine cell that produces part
- To know product families often consists of workstations comprising CNC machine tools.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Students will **Understand** the process of automation and types

CO2: Students will get **Exposure** to a workstation, which refers to the location in the factory where some well-defined task or operation is accomplished by an automated machine.

CO3: Understand Worker-and-machine combination or a worker using hand tools

CO4: Understand the Automated Material handling equipments and types

CO5: Student gets **Exposure** on portable power tools.

Course Contents		
Unit I	**Automation in Manufacturing**	**6 Hours**
Types and strategies of automation, pneumatic and hydraulic components circuits, Automation in machine tools, Mechanical Feeding and to changing and machine tool control transfer the automation.		
Unit II	**Automated flow lines**	**8 Hours**
Methods or work part transport transfer Mechanical buffer storage control function, design and fabrication consideration. Analysis of Automated flow lines: General terminology and analysis of transfer lines without and with buffer storage, partial automation, implementation of automated flow lines .		
Unit III	**Assembly system and line balancing**	**6 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Assembly process and systems assembly line, line balancing methods, ways of improving line balance, flexible assembly lines.

Unit IV	Automated material handling	6 Hours

Types of equipment, functions, analysis and design of material handling systems conveyor systems, automated guided vehicle systems.

Unit V	Automated storage systems	6 Hours

Automated storage and retrieval systems; work in process storage, interfacing handling and storage with manufacturing.

Unit VI	Fundamentals of Industrial controls	6 Hours

Review of control theory, logic controls, sensors and actuators, Data communication and LAN in manufacturing.
Business process Re-engineering: Introduction to BPE logistics, ERP, Software configuration of BPE.

25-VSEC-ME-5-01 : Instructional Design and Development

Teaching Scheme: Practical: 4 Hours/Week	Credit: 02	Examination Scheme: TW : 50 Marks

Course Objectives:
- Learn about instructional design models and educational pedagogies.
- Use digital tools to apply reflective and experiential learning techniques.
- Utilize digital platforms to foster collaborative and interactive learning environments.
- Engage students in inquiry-based and integrative learning using digital tools.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Learn about the instructional design model and various pedagogical approaches used in education.

CO2: Apply reflective and experiential learning techniques using digital tools to enhance learning outcomes.

CO3: Utilize various digital platforms to foster collaborative and interactive learning environments.

CO4: Utilize various digital platforms to engage students through inquiry-based learning and integrative instructional models.

CO5: Demonstrate proficiency in integrating technology-enhanced instructional strategies.

Course Contents			
Unit I	**Introduction to Instructional Design**	**4 Hours**	**Book No.: T1, T2**

Discipline of Instructional Design, ADDIE model of Instructional Design, Overview of Pedagogical Approaches, Students Learning Through Five Pedagogical Approaches In Education (R-2I-2C)

Assignment:
1. Design a comprehensive lesson plan for the given scenario: A computer science instructor aims to improve student engagement and understanding of "Dynamic Programming" using the ADDIE model and integrating five pedagogical approaches.

***Mapping of Course Outcomes**	CO1, CO5
Unit II	**Reflection Approach**	**4 Hours**	**Book No.:T2**

Introduction To Experiential Learning Cycle, Kolb's Experiential Learning Cycle, Benefits And Challenges Of Using The Reflective Pedagogical Approach Study of **Reflective Tools and Techniques like Google Forms/Docs, Mentimeter: KWL (Know, Want to know and Learned) Method, Flashcard etc.**

Assignment: Create a digital KWL chart using Google Docs to explore Renewable Energy Sources.

1. Develop interactive flashcards to explore various aspects of global climate change, encouraging self-assessment and deeper reflection on its causes, impacts, and mitigation strategies.

*Mapping of Course Outcomes	CO1, CO2, CO5		
Unit III	**Constructivist and Collaborative Approaches**	**4 Hours**	**Book No.: T2**

Significance of Collaborative and Constructive approaches, Collaborative learning model: Personal Learning Networks, Peer Learning Networks, Types of constructivism, The Role of teachers in a constructivist classroom, Study of Collaborative and Constructivist and Tools like **Copilot, WhiteBoard, Padlet, CodePen, Edpuzzle etc.**

Assignments:

1. Explore sustainable rural development through collaborative reflections and idea sharing on the interactive board.
2. Develop a collaborative coding project using an online collaborative platform to explore AI-assisted programming techniques.
3. Create a collaborative brainstorming session using any White board tools to design a sustainable city plan, integrating urban development and environmental conservation strategies

*Mapping of Course Outcomes	CO1, CO3, CO5		
Unit IV	**Inquiry-Based and Integrative Approaches**	**4 Hours**	**Book No.: T2**

Definition and Theoretical Foundations of Inquiry-Based Learning, Phases of Inquiry-based learning, 7 E -Instructional model, Significance of Integrative Approach, The role of teacher in integrative approach, Challenges to Integrative Pedagogical Approach, Study of Tools for **Inquiry-Based and** Integrative Approaches **like Kahoot, Edmodo, Slido, Socrative; Activity-Based Learning, Game Pedagogy, MindMeister etc.**

Assignments:

1. Conduct a collaborative ideation session using an online interactive tool to generate innovative ideas for digital solutions addressing current societal challenges.
2. Develop an online quiz(any inquiry based tool) to test knowledge of significant historical events, enhancing engagement and retention through gamified learning.
3. Create and conduct an interactive poll to gather opinions on current global affairs, analyzing diverse perspectives and trends in real time.
4. Develop an online quiz(any integrative tool) to evaluate comprehension of the Industrial Revolution, emphasizing technological innovations, economic changes, and social impacts.

*Mapping of Course Outcomes	CO1, CO4, CO5

25-ELC-ME-5-01: Research Methodology

Teaching Scheme: Theory: 2 Hours/Week	Credit: 02	Examination Scheme: ISE : 50 Marks

Prerequisites Courses: Technical Communication,Report Writing,Technical Project

Course Objectives:
- To Understand the concept of research, paper writing, similarities, etc
- To familiarize the students about the statistical methods, data interpretation , error analysis
- To carry out analysis on the a published paper

Course Outcomes:

After completion of the course, learners should be able to

CO1: Understand and Describe importance of research

CO2: Classify and select appropriate resources for Research..

CO3: Analyze the contents of literature and identify further scope.

CO4: Formulate a Research Problem.

CO5: Develop effective written and oral Presentation skills.

Course Contents

Unit I	Basic Concept in Research Methodology	6 Hours

Research Concepts – concepts – meaning – objectives – motivation. Types of research – descriptive research – conceptual research – theoretical research – applied research – experimental research.

Unit II	Research process	6 Hours

Research process – Criteria for good research – Problems in Indian context. Formulation of Research Task – Literature Review – Importance & Methods – Sources – Quantification of Cause Effect Relations – Discussions– Field Study – Critical Analysis of Facts Generated

Unit III	Research Proposals	6 Hours

Hypothetical proposals for future development and testing, selection of Research tasks. Applications of statistical methods in research

Unit IV	Mathematical Modeling and Simulation	6 Hours

Mathematical modeling and simulation – Concepts of modeling – Classification of mathematical models – Modeling with – Ordinary differential equations – Difference equations – Partial differential equations – Graphs – Simulation – Process of formulation of model based on simulation

Unit V	Technical Writing and reporting of research	6 Hours

Interpretation and report writing – Techniques of interpretation – Precautions in interpretation- Significance of report writing – Different steps in report writing – Layout of research report – Mechanics of writing research report – Layout and format – Style of writing – Typing – References – Tables – Figures – Conclusion – Appendices.

To be implemented for 2025-27 Batch

25-PCC-ME-5-05 : Mechanical Design Analysis

Teaching Scheme: Theory: 4 Hours/Week	Credit: 04	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Solid Mechanics,Theory of Machines,Design of Machine Elements

Course Objectives:
- To provide the technical understanding the concepts of Mechanical design in the background of real engineering problems
- To familiarize the students about the importance of Mechanical design apply to industrial applications
- To understand the Analysis of design

Course Outcomes:

After completion of the course, learners should be able to

CO1: To **Analyze** variance, factorial design and regression and understand reliability theory, design and analysis of reliability.

CO2: **Ability to Analyze** behavior of mechanical elements under fatigue and creep

CO3: To **Study** optimization and its methods.

CO4: To **Study** composite materials and its characteristics.

CO5: To **Design** mechanical components for various materials and process

Course Contents		
Unit I	**Fundamentals of Failure**	**8 Hours**
	Failure Analysis, Limit design, Fundamentals of fracture mechanics. Fatigue designing for finite life, contact stresses and surface failures, oil films and their effects	
Unit II	**Impact Dynamics**	**8 Hours**
	Impact: Energy methods, longitudinal stress waves in elastic media impact on beams, torsional impact on shafts and longitudinal impacts on helical springs.	
Unit III	**Thermal Properties and Stresses**	**8 Hours**
	Effect of short term and long term properties of materials on design, creep and stress relaxation. Elementary analysis of thermal stresses, thermal fatigue	
Unit IV	**Design with Composite Materials**	**8 Hours**
	Polymers and F.R.P. as materials form Mechanical components. Reliability based design: Definition normal exponential and Weibull distributions system reliability. Reliability based on strength.	

Unit V	Optimum Design	8 Hours

Basis concepts, introduction to various techniques of optimization, optimum design of simple mechanical components.

Unit VI	Design of Power Transmission Systems	8 Hours

Analysis and design of power transmission systems and elements such as: Spur, helical, bevel and worm gear drives, speed reducers and gearboxes, epicyclic gear drives, selection of ball and roller bearings.

Learning Resources

25-PCC-ME-5-06 : Computational Fluid Dynamics (Laboratory Practice - II)

Teaching Scheme: **Practical:** 4 Hours/Week	**Credit:** 02	Examination Scheme: **TW :** 50 Marks **PR/OR** : 50 Marks

Prerequisites Courses: Fluid Mechanics, Heat Transfer, Computer aided Engineering, Ansys

Course Objectives:
- To develop skills in computational fluid dynamics to address engineering problems.
- To understand the basic structure and capabilities of current commercial CFD codes.
- To apply CFD codes in the design of fluid systems and components

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Demonstrate** modeling of double pipe heat exchanger, simple exhaust system and airfoil using ANSYS Design Modeler (L3)

CO2: **Solve** steady, unsteady state heat conduction in slabs and steady state heat conduction through fins (L3)

CO3: **Solve** problems of laminar forced convection over flat plate, cylinder and through a pipe (L3)

CO4: **Solve** problems of turbulent forced convection over flat plate, cylinder, airfoil and through a pipe/helical pipe (L3)

CO5: **Analyze** heat transfer to a fluid by natural convection from a flat plate, radiation heat transfer between two parallel plates

Course Contents

Note: Any Ten of the following exercises are to be performed

1. Modelling a Mixing Elbow2-D) by use GAMBIT to create the geometry for a mixing elbow and then generate a mesh.
2. Creating and Meshing Basic Geometry The model consists of an intersecting brick and elliptical cylinder.
3. Turbulent pipe flow by using Ansys Fluent.
4. Laminar pipe flow by using Ansys Fluent.
5. Flow over an airfoil by using Ansys Fluent.
6. Compressible flow in a nozzle by using Ansys Fluent.
7. Flat Plate Boundary Layer by using Ansys Fluent.

Learning Resources

To be implemented for 2025-27 Batch

25-PEC-ME-5-02A: Advanced Heat Transfer		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Engineering Thermodynamics ,Heat Transfer,Fluid Mechanics

Course Objectives:
- To provide the technical understanding the concepts of heat transfer and fluid mechanics
- To familiarize the students about the importance of heat transfer and fluid mechanics processes apply to industrial applications
- To understand the heat transfer and fluid mechanics applications apply to other domain of thermal engineering in general

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Analyze** steady state and transient heat conduction problems of real life Thermal systems

CO2: **Analyze** extended surface heat transfer problems and problems of phase change heat transfer like boiling and condensation

CO3: **Apply** the basic principles of classical heat transfer in real engineering application

CO4: **Analyze** the analytical and numerical solutions for heat transfer problems.

CO5: **Understand** the basic concepts of turbulence and their impact on heat transfer

CO6 : **Analyze** convective heat transfer in common geometries like tube, plate, cylinder

Course Contents		
Unit I	**Steady State and Transient Heat Conduction**	**8 Hours**

Concept of continuum and definition of a fluid. Body and surface forces, stress tensor, Scalar and vector fields, Eulerian and Lagrangian approach.

Unit II	**Boiling and Condensation**	**8 Hours**

Motion of fluid element - translation, rotation and vorticity; strain rate tensor, continuity equation, stream function and velocity potential. Transport theorems, constitutive equations.

Unit III	**Boundary Layer Theory**	**8 Hours**

Derivation of Navier Stokes equations for compressible flow. flow over a flat plate, cylinders and spherical bodies, theory of hydrodynamic lubrication.
Boundary layer: derivation, exact solutions, Non dimensionalisation of Boundary layer equation, Blasius (similarity solution).

Unit IV	Modes & Method of Heat Transfer	8 Hours
	Brief introduction to different modes of heat transfer: conduction: general heat conduction equation-initial and boundary conditions. **Finite difference methods for conduction**: 1d & 2d steady state and simple transient heat conduction problems-implicit and explicit methods.	

Unit V	Transient heat conduction	8 Hours
	Transient heat conduction: lumped system analysis, Heisler charts, semi-infinite solid, use of shape factors in conduction, 2d transient heat conduction, product solutions.	

Unit VI	Convection and Boiling:	8 Hours
	Convection and Boiling: Flow over a flat plate: Application of empirical relations to variation geometries for laminar and turbulent flows. hydrodynamic *&* thermal entry lengths;use of empirical correlations. Approximate analysis on laminar free convective heat transfer, combined free and forced convection. Boiling curve, correlations, assumptions & correlations of film condensation for different geometries

25-PEC-ME-5-02B: Stress Analysis

Teaching Scheme: Theory: 4 Hours/Week	Credit: 04	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Strength of Materials,Design of Machine Elements

Course Objectives:
1. To understand and analysis stress and strain at a point in deformable solids.
2. To understand different approaches to obtain stresses, strains and deformations induced in the solids.
3. To solve thin section members for bending and torsion.
4. To evaluate stresses, deflection due to line or point contact in solids.

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Formulate and Analyze** Stress Field equations such as equilibrium equations, compatibility and constitutive relationship

CO2: **Formulate and Analyze** Stresses in pressurized cylinder and rotating disc.

CO3: **Apply** Energy methods to evaluate stresses and strains.

CO4: **Analyze** and Determine the Torsion and Bending of thin wall section

CO5: **Analyze** and estimate contact stresses in conforming and non-conforming shapes.

CO6: **Understand** experimental methods for stress evaluation estimate the same using resistance strain gauging technique and Photoelasticity technique.

Course Contents		
Unit I	**Theory of Elasticity**	**6 Hours**
Analysis of Stresses and Analysis of Strain. Stress Tensor, Compatibility equations in two and three dimensions, Airy's stress functions in rectangular and Polar coordinate systems.		
Unit II	**Pressurized Cylinders and Rotating Disks,**	**6 Hours**
Governing equations, stress in thick walled cylinders under internal and external pressure, shrink fit compound cylinders, stresses in rotating flat solid disk, flat disk with central hole, disk of uniform strength.		
Unit III	**Energy Methods**	**6 Hours**
Energy method for analysis of stress, strain and deflection Theorem's - theorem of virtual work, The theorem of least work, Castiglioni's theorem.		
Unit IV	**Thin wall Members:**	**6 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Torsion of thin walled members of the open cross section. Torsion of Multiply Connected Thin-Walled Sections Concept of shear center in symmetrical and unsymmetrical bending, Shear center for thin wall beam cross section, open section with one axis of symmetry.

Unit V	Contact stresses	6 Hours

Geometry of contact surfaces, method of computing contact stresses and deflection of bodies in point contact, Stress for two bodies inline contact with load normal to contact area and load normal and tangent to contact area, For cases like - gear contacts, contacts between cam and follower, ball bearing contacts.

Unit VI	Experimental stress analysis	6 Hours

Dimensional analysis, analysis techniques, strain gauges, types of strain gauges, materials, configuration, instrumentation, characteristics of strain gauge measurement, theory of photo-elasticity, elements of polariscope, simple and circular polariscope, fringes in dark and white field, isoclinic and isochromatic fringe patterns, evaluation of stresses from these fringe patterns.

25-PEC-ME-5-02C: Advanced Optimization Techniques

Teaching Scheme: Theory: 4 Hours/Week	Credit: 04	Examination Scheme: ISE : 40 Marks SEE : 60 Marks

Prerequisites Courses: Calculus, linear algebra, Engineering Mathematics,Numerical Methods and optimization

Course Objectives:

- Develop proficiency in mathematical methods and techniques
- apply optimization techniques to solve both linear and non-linear programming problems
- Understand and apply dynamic programming methods to solve complex industrial management problems
- Develop the capability to simulate and analyze thermal engineering systems
- comprehensive understanding of integer and stochastic programming

Course Outcomes:

After completion of the course, learners should be able to

CO1: Enables to acquire mathematical methods and apply in engineering disciplines.

CO2: Apply methods of optimization to solve a linear,non-linear programming problem by various Methods

CO3: Optimize engineering problem of nonlinear-programming with/without constraints, by using this technique.

CO4: Use of dynamic programming problems in controlling industrial management.

CO5: Simulate Thermal engineering system problem.

CO6: Understand integer programming and stochastic programming to evaluate advanced optimization techniques.

Course Contents		
Unit I	**Single Variable Nonlinear Unconstrained Optimization**	**6 Hours**

One dimensional Optimization methods, Unimodal function, elimination method, Fibonacci method, golden section method, interpolation methods- quadratic & cubic interpolation methods.

Unit II	**Multi Variable Nonlinear Unconstrained Optimization**	**6 Hours**

Direct search method – Univariant Method – pattern search methods – Powell's – Hook – Jeeves, Rosenbrock search methods – gradient methods, gradient of function, steepest decent method, Fletcher reeves method. Variable metric method.

Unit III	**Geometric & Dynamic Programming**	**6 Hours**

Geometric Programming: Polynomials – arithmetic – geometric inequality – unconstrained G.P– constrained G.P

Dynamic Programming: Multistage decision process, principles of optimality, examples, conversion of final problem to an initial value problem, application of dynamic programming, production inventory. Allocation, scheduling replacement.

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Unit IV	Linear Programming & Simulation	6 Hours

Linear Programming: Formulation – Sensitivity analysis. Change in the constraints, cost coefficients, coefficients of the constraints, addition and deletion of variable constraints.
Simulation: Introduction – Types – Steps – application – inventory – queuing – thermal system.

Unit V	Integer & Stochastic Programming	6 Hours

Integer Programming: Introduction – formulation – Gomory cutting plane algorithm – Zero or one algorithm, branch and bound method.
Stochastic Programming: Basic concepts of probability theory, random variables – distributions – mean, variance, Correlation, co variance, joint probability distribution, stochastic linear, dynamic programming.

Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses:

Material Science and Engineering,Mechanics of Materials,Engineering Mechanics,Manufacturing Processes,Engineering Mathematics.

Course Objectives:

- **Understand Modern Materials**: Gain knowledge of advanced materials like dual-phase alloys, HSLA, composites, and nano-materials.
- **Analyze Stress-Strain Behavior**: Learn to interpret stress-strain responses under various loading conditions using yield criteria and transformations.
- **Master Material Testing**: Develop skills in performing and analyzing uni-axial, biaxial tension, and bending tests, considering effects like temperature and the Bauschinger effect.
- **Explore Work Hardening**: Understand strain hardening and apply models for predicting material behavior under complex loading.
- **Study Elastic-Plastic and Visco-Plastic Behavior**: Learn about elastic-plastic deformation, residual stresses, and visco-elasticity through theoretical models.
- **Apply Theoretical Models**: Utilize models to predict material behavior under varying conditions, enhancing material selection and design decisions.

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Apply** the mechanics of modern materials in recent engineering applications.

CO2: Solve the basics problems of finding stresses and strains at a point under complex loading conditions

CO3: **Study** material behavior under forms of loading other than uniaxial tension

CO4: **Identify and investigate** engineering problems involving plastic deformation during strain hardening.

CO5: **Realize** the plastic and elastic- plastic behavior of materials under different loading conditions

CO6: **Formulate** the mathematical modelling of Visco-Elastic materials and apply to engineering materials for behavioural study

Course Contents		
Unit I	**Modern Materials in Design Engineering**	**6 Hours**

Dual phase alloy, HSLA, lightweight non-ferrous alloy and their full range stress strain behavior subjected quasi-static and high strain rate loading, Composites and its orthotropic properties, Plastics,
Smart materials, Nano-materials – types, applications and its properties

Unit II	Response of metals and alloys under applied loading	6 Hours
	Stress, strain transformations, Mohr's circle, Isotropic elasticity, Anisotropic elasticity, Anisotropic thermal expansion, Octahedral shear stress, Yield criteria, Yield surface, Yield curve.	
Unit III	Tensile testing	6 Hours
	Uni-axial and biaxial tension test, Full range stress-strain curves, True stress-strain curve, Bridgman correction, Temperature rise, Bauschinger effect, Combined bending and torsion test, Three points bend test, Elastic recovery	
Unit IV	Stress- Strain relations for work hardening materials	6 Hours
	Experimental studies of plastic deformations under simple and complex loading, Strain hardening, Power law approximations, Isotropic, Kinematic and combined hardening models, Theory of plastic flow, Strain-rate and temperature dependence of flow stress	
Unit V	Plastic and Elastic-Plastic Behaviour	6 Hours
	Deformation theory of plasticity, Thermo-plasticity, Behaviour of metals with initial deformations. Equations of Elastic-Plastic Equilibrium, Residual stresses and strains, Plastic-rigid body, Elastic-Plastic bending and torsion, Elastic-Plastic bodies under variable loading	
Unit VI	Elasto-Visco-Plasticity	6 Hours
	Visco-elasticity, Rheological models, Maxwell model, Voigt model, Voigt–Maxwell model, Natural decay, Dependence of damping and elastic modulus on frequency, Thermo-Elastic effect, Low temperature and high temperature Visco-plastic deformation models, Rubber elasticity, Damping, yielding, effect of strain rate, Crazing.

25-PEC-ME-5-03A: Design of Heat Exchangers		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Engineering Thermodynamics,Heat Transfer,Solid Mechanics,Design of machine Element

Course Objectives:
- Student should able to understand types of heat exchangers,working of heat exchangers
- Analysis and performance calculation of heat exchangers
- design of heat of exchangers for industrial applications

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Demonstrate** and of heat exchanger design methodology, and design considerations

CO2: **Analyze** performance of Heat exchanger by applying basic design theory.

CO3: **Design** and conduct experiment on one from double pipe, shell and tube, tube fin, plate type and plate-fin heat exchanger.

CO4: **Demonstrate** selection criteria of HEX and conduct an independent research to suggest suitable HEX.

CO5: **Model and illustrate** heat exchanger based on I-law and irreversibility.

CO6: **Study and analyze** losses in HEX, and upcoming advancements.

Course Contents		
Unit I	**Basic Introduction**	**6 Hours**
Classification, overview of heat exchanger design methodology, Design specifications, thermo hydraulic design, and other considerations.		
Unit II	**Basic Design Theory**	**6 Hours**
LMTD method, ε-NTU method, P-NTU method, ψ-P method and P1- P2 method.		
Unit III	**Heat Exchanger Design Procedures**	**6 Hours**
Design of double pipe, shell and tube, tube fin,plate type and plate-fin heat exchanger.		
Unit IV	**Selection of Heat Exchangers**	**6 Hours**
selection criteria, general selection guidelines of shell and tube heat exchanger, plate type heat exchanger		
Unit V	**Thermodynamic Modeling and Analysis**	**6 Hours**

modeling of heat exchanger based on I-law and Irreversibility.		
Unit VI	**Header Design**	**6 Hours**
Flow maldistribution, fouling and corrosion, advances in heat exchanger		
Learning Resources

4-PEC-ME-5-03B: Tribology in Design		
Teaching Scheme: Theory: 3Hours/Week	**Credit:** 03	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Fluid Mechanics, Engineering Metallurgy, Strength of Materials

Course Objectives:
- To provide necessary concepts, knowledge and skills in Engineering Tribology with design aspect
- To impart friction, wear and lubrication theory and their appropriate use in design and maintenance of machine components
- To provide hands on training with design of bearing, friction ,wear test rig for laboratory purpose

Course Outcomes:

After completion of the course, learners should be able to

CO1: **Apply** theories of friction and wear to various practical situations by analyzing the physics of the process.

CO2: **Select** materials and lubricants to suggest a tribological solution to a particular situation.

CO3: **Design** a hydrodynamic bearing and measure the performance parameters using various bearing charts.

CO4: **Analyze** the behavior of bearing in different lubrication regimes

CO5: **Determine** the load carrying capacity in air lubricated bearing

CO6: **Understand** the tribological aspects in different applications and understand the solution to avoid wear and friction.

Course Contents		
Unit I	**Friction and wear**	**6 Hours**

Friction control and wear prevention, Boundary lubrication, Tribological properties of bearing materials and lubricants, Theories of friction and wear, Instabilities and stick-slip motion

Unit II	**Lubrication of bearings**	**6 Hours**

Mechanics of fluid flow, Reynold's equation and its limitations, Idealized bearings, Infinitely long plane pivoted and fixed show sliders, Infinitely long and infinitely short (narrow) journal bearings, Lightly loaded infinitely long journal bearing (Petroff's solution), Finite bearings - hydrostatic, hydrodynamic and thrust oil bearings, Heat in bearings

Unit III	**Hydrostatic squeeze film**	**6 Hours**

Circular and rectangular flat plates, variable and alternating loads, piston pin lubrication, application to journal bearings

Unit IV	**Elasto-hydrodynamic lubrication**	**6 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Pressure-viscosity term in Reynold's equation, hertz theory, Ertel-Grubin equation, lubrication of spheres		
Unit V	**Air lubricated bearings**	**6 Hours**
Tilting pad bearings, hydrostatic, hydrodynamic and thrust bearings with air lubrication		
Unit VI	**Tribological aspects of Rolling motion**	**6 Hours**
Mechanics of tire-road interaction, road grip and rolling resistance, tribological aspects of wheel on rail contact, tribological aspects of metal rolling, drawing and extrusion		
Learning Resources		
Reference Books :		
R1. Principles of Lubrication, Camaron, Longman's Green Co. Ltd. **R2.**The Design of Aerostatic Bearings – J. W. Powell **R3.**Theory Hydrodynamic Lubrication, Pinkush and Sterrolicht **R4.** Principles of Lubrication, Camaron, Longman's Green Co. Ltd.

25-PEC-ME-5-03C: Soft Computing Techniques		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE** : 60 Marks

Prerequisites Courses: Data Structures and Algorithms & Mathematics for Computer Science

Course Objectives:

- Provide an understanding of the different paradigms of soft computing such as fuzzy logic, neural networks, and genetic algorithms.
- Explore the applications of fuzzy logic in control systems and decision making.
- Provide an in-depth understanding of artificial neural networks and deep learning.
- Explore the applications of evolutionary algorithms in optimization problems.
- Explain how different soft computing techniques can be integrated to solve complex problems.
- Provide an understanding of the latest research and developments in soft computing.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Students will be able to differentiate between traditional computing and soft computing techniques.

CO2: Students will learn to apply fuzzy logic to solve control system problems and make decisions under uncertainty.

CO3: Students will gain a solid foundation in neural network architectures and learning algorithms.

CO4: Students will learn to apply evolutionary algorithms to solve optimization problems effectively.

CO5: Students will be able to design and implement hybrid systems combining fuzzy logic, neural networks, and genetic algorithms.

CO6: Students will be able to apply advanced soft computing techniques to complex problems.

Course Contents		
Unit I	**Soft Computing Basic Introduction**	**8 Hours**

Overview of Soft Computing: Definition, importance, and comparison with traditional hard computing methods.
Components of Soft Computing: Key concepts of fuzzy logic, neural networks, genetic algorithms, and evolutionary computation techniques.

Unit II	**Fuzzy Logic**	**8 Hours**

Fuzzy Sets and Systems: Understanding fuzzy sets, operations on fuzzy sets, and fuzzy relations.
Fuzzy Logic Controllers: Design principles, implementation, and practical applications.
Fuzzy Inference Systems: Mamdani and Sugeno models, defuzzification methods.

Unit III	**Artificial Neural Networks**	**8 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Introduction to ANN: Basic concepts, models, and biological inspiration behind neural networks.
Learning and Training: Methods of supervised, unsupervised, and reinforcement learning.
Types of Neural Networks: Overview of feedforward, recurrent, convolutional, and deep neural networks.

Unit IV	Evolutionary Algorithms	8 Hours

Introduction to Evolutionary Computation: Overview of genetic algorithms, evolution strategies, and genetic programming.
Genetic Algorithms: Basic concepts including selection, crossover, mutation, and fitness functions.
Advanced Algorithms: Concepts of differential evolution, particle swarm optimization, and ant colony optimization.

Unit V	Hybrid Systems	8 Hours

Combining Techniques: Integration of neuro-fuzzy systems, genetic-neural systems, and fuzzy-genetic systems.
Design and Implementation: Methodologies for combining soft computing techniques.

Unit VI	Advanced Topics in Soft Computing	8 Hours

Deep Learning: Introduction, architectures, and frameworks of deep learning. Reinforcement Learning: Principles, Markov decision processes, and Q-learning.
Recent Advances and Trends: Latest research, emerging technologies, and future directions in soft computing.

25-PEC-ME-5-03D: World Class Manufacturing		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 04	**Examination Scheme:** **ISE :** 40 Marks **SEE :** 60 Marks

Prerequisites Courses: Manufacturing Process,Production Management,Quality Management,Industrial Engineering,,Operation Management

Course Objectives:
- Discover best practices adopted by industry in the sphere of WCM
- Examine the Barriers to using IT strategically and Strategic Planning Methodology for World Class Manufacturing.
- Develop communication strategies and tools for effective implementation of WCM practices.
- Implement the World Class Manufacturing Plan across an organization.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Define challenges in world class manufacturing

CO2: Study various world class manufacturing strategies.

CO3: Understand total quality and employee involvement in manufacturing.

CO4: Discuss different world class information systems for change management.

CO5: Identify various methods and processes for WCM using brainstorming.

CO6: Describe method to monitor performance in WCM.

Course Contents		
Unit I	**Historical Perspective**	**6 Hours**
World class Excellent organizations – Models for manufacturing excellence – Business Excellence.		
Unit II	**Benchmark, Bottlenecks and Best Practices**	**6 Hours**
Concepts of benchmarking, bottleneck and best practices, Best performers – Gaining competitive edge through world class manufacturing – Value added manufacturing – eliminating waste – Toyota Production System – example		
Unit III	**System & Tools for World Class Manufacturing**	**6 Hours**
Improving Product & Process Design – Lean Production – SQC , FMS, Rapid Prototyping , Poka Yoke , 5-S ,3 M, use of IT ,JIT, Product Mix , Optimizing , Procurement & stores practices , Total Productive maintenance , Visual Control		
Unit IV	**Human Resource Management in WCM**	**6 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Adding value to the organization – Organizational learning – techniques of removing Root cause of problems – People as problem solvers – New organizational structures . Associates – Facilitators –Teamsmanship – Motivation and reward in the age of continuous improvement.

Unit V	Typical Characteristics of WCM Companies	6 Hours

Performance indicators – what is world class Performance – Six Sigma philosophy

Unit VI	Indian Scenario	6 Hours

Leading Indian companies towards world class manufacturing – Task Ahead.

25-VSEC-ME-5-02 : Drone Technology		
Teaching Scheme: Practical: 4 Hours/ Week	**Credit:** 02	**Examination Scheme:** **TW** : - 50 Marks **OR:** - 50 Marks

Prerequisites Courses: Basics of Electronics, physics, mathematics, Computer science, Communication system

Course Objectives:
- Understand the basic principles and concepts of drone technology
- Learn the principles and practices of drones
- Explore the simulation tools, Drone Programming and firmware used in drone technology.
- Examine the diverse applications and use cases of drones in various sectors.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Identify and Explain Drone Components and Systems

CO2: Design and Assemble a Functional Drone

CO3: execute programs on Simulation Tools and utilize the firmware.

CO4: Analyze and Apply Drones in Industry-Specific Use Cases

Course Contents		
Unit I	**Fundamentals of Drone**	**7 Hours**

Types of Drone, Main Components and secondary components of Drone, Applications of Drone, Identification of motor movements and motor sizes, Selection of components as per sizes, Propeller Direction, UAS and its Types, Drone Rules, Drone Zone-Permission Protocol.

#Exemplar/Case Studies- Study of Assembly of drones using components.

Unit II	**Drone Design and Operations**	**7 Hours**

Drone Design -pixhawk 2.4.8 Connection,,Yaw, Roll, Pitch, Throttle, Sensors in Drones (Gyroscopes, Accelerometers, GPS, etc.) , Communication Systems & Protocols, UAV Coordinate Frames and Their Importance.

Flight Operation-Pre-Flight Planning (Weather, Airspace, Mission Objectives), Flight Path and Waypoint Planning,Flight Logs and Team Management,, Ground Testing and Calibration, Flight Testing Procedures

#Exemplar/Case Studies: Study of Aero GCS Green

Unit III	**Communication and firmware Development**	**8 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Communication Protocols-Need and Importance, **Drone Simulators**-ArduPilot, Mission Planner, Implementing sensors in simulation, **Drone Programming with Python-**Dronekit Python installation,, Integrate **Arduino** with drone components, Android development, Firmware development

#Exemplar/Case Studies : Study of Mission planner

Unit IV	Use Cases of Drones	8 Hours

Drones in Agriculture, Surveying and Mapping, Data Collection and Image Analysis,Machine Learning and AI in Drone Data Analysis,Swarm Drones and Cooperative Behavior,

#Exemplar/Case Studies	**Study of Aerogcs Green**

Assignments:

1. Study of all Drone Components with specifications
2. Assembly of the Frame , Motor Mounting and Propeller Installation, ESC Wiring and Battery Placement,Initial Calibration of Sensors.
3. Calibration of Drone with Mission Planner.
4. Flight of drones to navigate through a set course autonomously.
5. Study of Integration of Arduino/Raspberry Pi with Drones
6. Spraying of Pesticides through agriculture Drone
7. Study of GEOAI Technology
8. Capture stunning aerial photos and videos.
9. Study of pickstork for image analysis

25-CCC-ME-5-01 : The Scientific Study of Mind, Matter, and Consciousness

Teaching Scheme: Theory: 3 Hours/Week	**Credit:** 02	**Examination Scheme:** **TW** : 50 Marks

Prerequisites Courses: Indian Knowledge System

Companion Course: -NA

Course Objectives:
- To introduce the core concepts of mind, matter, and consciousness from a scientific perspective.
- To explore the neuroscience of the mind and its relation to consciousness.
- To develop techniques for managing emotions and promoting mental well-being.
- To practice mindfulness and conscious decision-making.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Understand core concepts of mind, matter, and consciousness.

CO2: Identify the relation to neuroscience of mind and consciousness.

CO3: Use strategies for emotional regulation and mental health.

CO4: Assimilate mindfulness and philosophical insights to improve decision-making.

Course Contents		
Unit I	**Introduction to Neuroscience**	**07 Hours**

Foundation of Neuroscience, Basic Concepts: Mind, matter, and consciousness definitions; **Brain Anatomy:** Major structures and their functions; **Brain Waves:** Types (Alpha, Beta, Delta, Theta, Gamma), Correlation with consciousness states (awake, sleep, meditation)

#Exemplar/Case Studies: Meditation, Biofeedback : optimizing brain wave patterns.

Unit II	**Emotions and Thinking**	**07 Hours**

Emotions and the Brain: Framework for Emotional Intelligence, Biological mechanisms (amygdala, prefrontal cortex), Emotional regulation

Emotion Management Techniques: Mindfulness, Meditation, Cognitive Behavioral Therapy (CBT)

Critical Thinking: Cognitive biases and logical fallacies,

Decision Making: Rational vs. intuitive models.

#Exemplar/Case Studies: Real-life scenarios and its influence on mind

Unit III	**Mindfulness Practices**	**09 Hours**

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Inner Circle Management : Prime and Non-prime Activity, Self Awareness and Self Care through Meditation,

Five Core Concepts of Mindfulness: (a) present-focused awareness, (b) an accepting or open attitude, (c) a non-judging approach, (d) compassion for self and others, and (e) the energy of mindfulness**,**

Benefits of Mindfulness, Mindfulness Techniques: Mindful Yoga,

Scientific Evidence : Research findings on Neuroplasticity and Mindfulness

#Exemplar/Case Studies: Success Routine Framework (21 Days : write a report), Practice any type of breathing exercise (Presentation : share the experience)

Unit IV	Sapta Jyothir Vikas and Wisdom of "SEE"	07 Hours

Sapta Jyothir Vikas Philosophy: Rise of this philosophy in 21st Century, Core principles of Sapta Jyothir Vikas,

Wisdom of "SEE" (Scientific/Social Perspective, Experience, Expertise): Definition, framework and components,

Integration of Sapta Jyothir Vikas and SEE: Practical applications in decision-making.

#Exemplar/Case Studies	**Techniques for Advancing Consciousness:** Mindfulness and meditation practices. Strategies for mental stability and conscious decision-making.
*Mapping of Course Outcomes	CO3, CO4

25-ELC-ME-5-02 : Technical Communication		
Teaching Scheme: Theory: 4 Hours/Week	**Credit:** 02	**Examination Scheme:** **TW** : 50 Marks

Prerequisites Courses: Research Methodology

Course Objectives:
- Identify research gaps and select an advanced topic that addresses these gaps.
- Analyze the latest technologies and methodologies in research to present creatively.
- Create high-quality technical documents and professional communication materials using enhanced writing skills.
- Evaluate complex engineering problems, formulate solutions, and apply critical thinking skills to develop and present comprehensive research plans.

Course Outcomes:

After completion of the course, learners should be able to

CO1: Critically analyze advanced topics of professional interest.

CO2: Write high-quality technical documents and research papers.

CO3: Deliver and present advanced research methodologies.

CO4: Deliver professional technical presentations with confidence and clarity.

Course Contents		
Unit I	**Introduction and Topic Selection**	**8 Hours**

Overview of seminar objectives and structure, Guidelines for selecting advanced research topics for dissertation, Conducting a comprehensive literature review, Advanced use of academic databases and citation management tools.

#Exemplar/Case Studies: Select a research topic in consultation with the guide. Hands-on session on systematic literature search.

Unit II	**Writing Research Papers and Reports**	**8 Hours**

Components and structure of high-quality research papers. Using LaTeX for professional report preparation.

#Exemplar/Case Studies : Formatting and structuring research papers in LaTeX.

Unit III	**Professional Presentation Skills**	**8 Hours**

Designing professional presentations, Techniques for engaging public speaking, Create and deliver a Detailed presentation on the selected research topic.

#Exemplar/Case Studies Creating presentation using popular tools like Canva.

SNJB's Late Sau. K. B. Jain College of Engineering, Chandwad
(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)
Curriculum Structure and Evaluation Scheme
To be implemented for 2025-27 Batch

Unit IV	Seminar of Research Topic	6 Hours
Deliver seminar presentations on any topic of interest (30-35 minutes each). Submit research reports in LaTeX format on any topic presented.		
#Exemplar/Case Studies: Presenting a Dissertation/Thesis
